

Methods and apparatuses for operating with writeable media. In one aspect of the invention, an exemplary method includes inserting a writeable media into a drive system which is coupled to a data processing system, instructing the data processing system to write or erase first data on the writeable media, and instructing the data processing system to eject the writeable media from the drive system, wherein upon the instructing of the data processing system to eject, the data processing system writes or erases the first data on the writeable media. The present invention includes other methods and apparatuses which perform at least one of these methods, including data processing systems which perform at least one of these methods and computer readable media which when executed on data processing systems cause the systems to perform at least one of these methods.
